RISK MANAGEMENT

T100 E-Learning

Our adaptable e-learning tool allows you to choose from a library of accredited online training courses on a sophisticated learning management system.

ACCREDITED | CONVENIENT | TRACKABLE

Upskill your team
with versatile
T100 e-learning
solutions

ONLINE LEARNING THAT KEEPS PACE WITH YOUR ORGANISATION

Our versatile e-learning system is a convenient and easily-trackable way of upskilling your team and ensuring that required training is delivered to everyone who needs it. Our system has the ability to track external training completed and create course bundles for inductions.

Our E-learning platform can support you in a number of ways:

1. **Pay per credit** - buy credits to allow courses from our extensive library to be assigned to a particular user - this also gives them access to our training record system.
2. **Pay per user** - If you have more users it may be more economical to allow access to multiple courses to a larger group of employees or contractors.
3. **Build your own courses** - We have also developed our own Learning Management System (LMS) that organisations can plug into to deliver their own SCORM-compliant e-learning courses. We can also assist with getting your own courses certified.
4. **Bespoke E-Learning courses** - we can produce tailored e-learning courses to suit your organisation, covering whatever topics you require.

WHAT DOES SCORM STAND FOR?

SCORM stands for Sharable Content Object Reference Model. It is a set of technical standards and specifications for e-learning software products that allows them to be easily shared and reused across multiple learning management systems (LMS).

How does it work?

The SCORM standard provides a way for e-learning content to be packaged into a single file, which can then be uploaded to an LMS and delivered to learners. SCORM also defines a set of communication protocols between the e-learning content and the LMS, allowing the content to send and receive data about the learner's progress and performance. This enables the LMS to track and report on the learner's activities, such as completion of modules, quiz scores, and time spent on each activity.

Our E-Learning system also offers a **complete training matrix**, with the ability to track training records and attendance records for online or in-person training completed outside of the system as well as all e-learning courses. This allows you to build a comprehensive training record for each team member.

COURSE LIBRARY

Accident Reporting

Asbestos Awareness

Cars at Work

Confined Spaces

Contractor Management

COSHH Awareness

CPR Awareness

Director Responsibilities

Drugs & Alcohol Awareness

DSE Awareness

Electricity Awareness

Entrances, Exits & Signs Awareness

Environmental Awareness

Fire Awareness

Noise Awareness

Office Safety Awareness

Plant & Machinery Awareness

PPE Requirements

Radiation Awareness

Slips, Trips & Falls Awareness

Stress Awareness

Vibration (HAVS) Awareness

Violence, Aggression & Bullying Awareness

Working at Height Awareness

We can also develop any bespoke e-learning content you may require, or provide support if you plan to create your own e-learning content. As an accredited training provider, we can assist with getting courses certified by RoSPA, IIRSM and/or CPD.

OPTION TO INTEGRATE HEALTH & SAFETY AND HR

HR

- Employee records
- Policy management
- Absence & holiday management
- Disciplinary & grievances
- Onboard/offboarding
- Training/competency records
- Recruitment
- Employment tribunal management
- Occupational health referrals
- Full reporting across HR, safety and e-learning
- Induction management

Health & Safety

- Review checklists & incidents, with 24/7 access via our cloud portal
- Complete risk assessments quickly and easily with our bank of templates and suggested control measures
- Stay informed with real-time notifications & reporting
- Usable on mobile and tablet with our iOS and Android app
- Dedicated software support and advice from CMIOSH consultants
- Ensure that equipment and machinery is kept up to date with inspections and services
- Save time by automating processes and assigning tasks to individuals

TESTIMONIALS

"Three years after our implementation of T100 DSE E-Learning we have consistently maintained near 100% staff fulfilment of requisite training and self-assessments, mitigating the risk of claims on the basis of work-related injury.

"Levels of injuries have dropped, and, following the results of the initial training and self assessment deployment, we have refreshed our office equipment to further mitigate against risks of claims. Staff completion of training modules is tracked by the system, ensuring a fully auditable and robust programme."
